

## CONTROL ELECTRICAL COSTS BY Watching Your Watts

Knowledge is power. And knowing how much power your appliances consume is, er ... powerful. The point is, with a Watt-Minder from Mashita Electronics, it's easy to monitor how much power any of your 115-volt appliances consume. You can even program the Watt-Minder with your local electrical costs, and it will do the math to tell you how much a given appliance will cost you by the day, month, and year.

This can be an invaluable tool for locating and replacing inefficient appliances in your home. For example, replacing an older refrigerator with a new model could save you as much as \$138 per year.

Programming and using the Watt-Minder is about as complicated

as setting your coffee maker for a delayed brew time.

Expect to pay about \$40 for a Watt-Minder. Learn more by visiting [Watt-Minder.com](http://Watt-Minder.com).

### HANDY SANDER

Here's a sanding solution that fits like a glove ... because it is one.

Norton 3X Sanding Gloves provide a firm but flexible structure that eliminates hand fatigue caused by a conventional sanding block and makes it easier to sand irregular shapes. Each glove comes with a replaceable coarse sanding pad for about \$13. Medium and fine grits are also available. For more information, visit [NortonConsumer.com](http://NortonConsumer.com).
